

Reduce the Total Cost of Ownership for Your Observability Stack

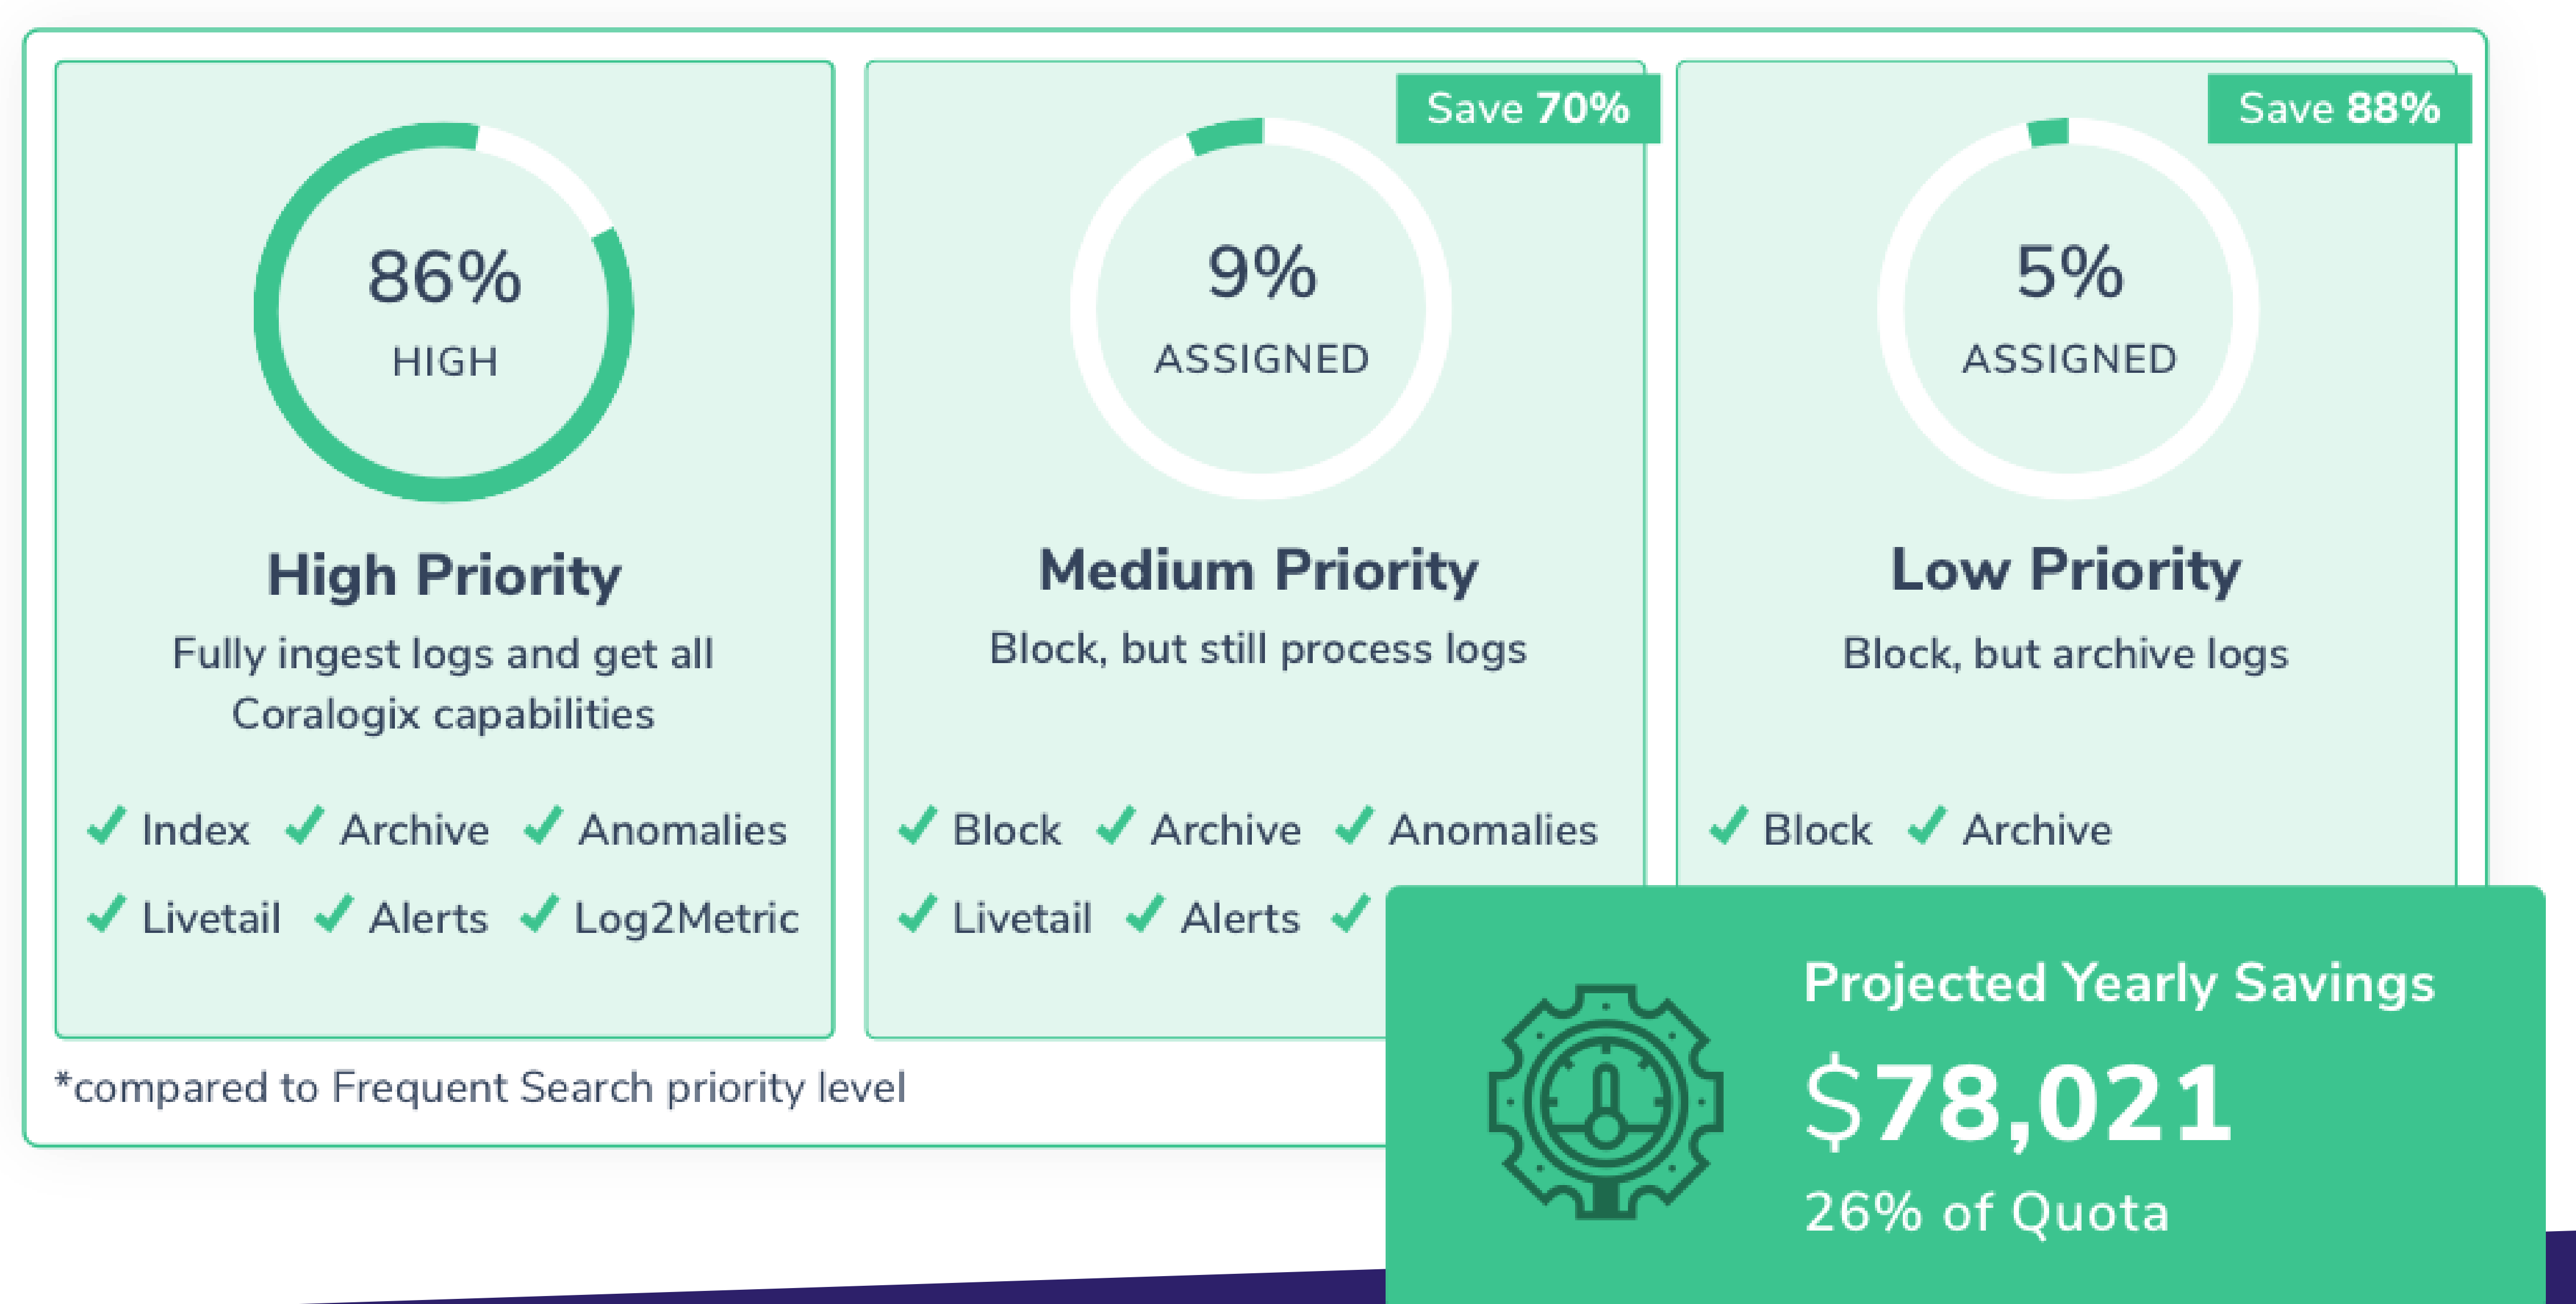

Different data is used differently and to achieve different goals. With Coralogix, you pay relative to the value of your data, not the volume.

Priority-based ingestion strategies allow for full observability by reducing the cost of analyzing and storing your data while simultaneously improving system visibility.

Introducing the TCO Optimizer

Leverage proprietary Streama technology to automatically analyze and prioritize your data. Using the TCO Optimizer, you can assign each application/subsystem pair and log severity level to a different data pipeline, giving you maximum control over your data and how it's handled.

Pay based on the value of your data, rather than the volume

Monitoring Data

The data you need to monitor, visualize, track, and alert on in real-time. This data is available in your monitoring dashboards for up to a year.

Frequent Search Data

The data you frequently search as raw textual data. This data is indexed and stored on highly available SSDs for lightning-fast queries.

Compliance Data

The data you need for compliance purposes. This data is archived immediately and can be queried and reindexed at any time.

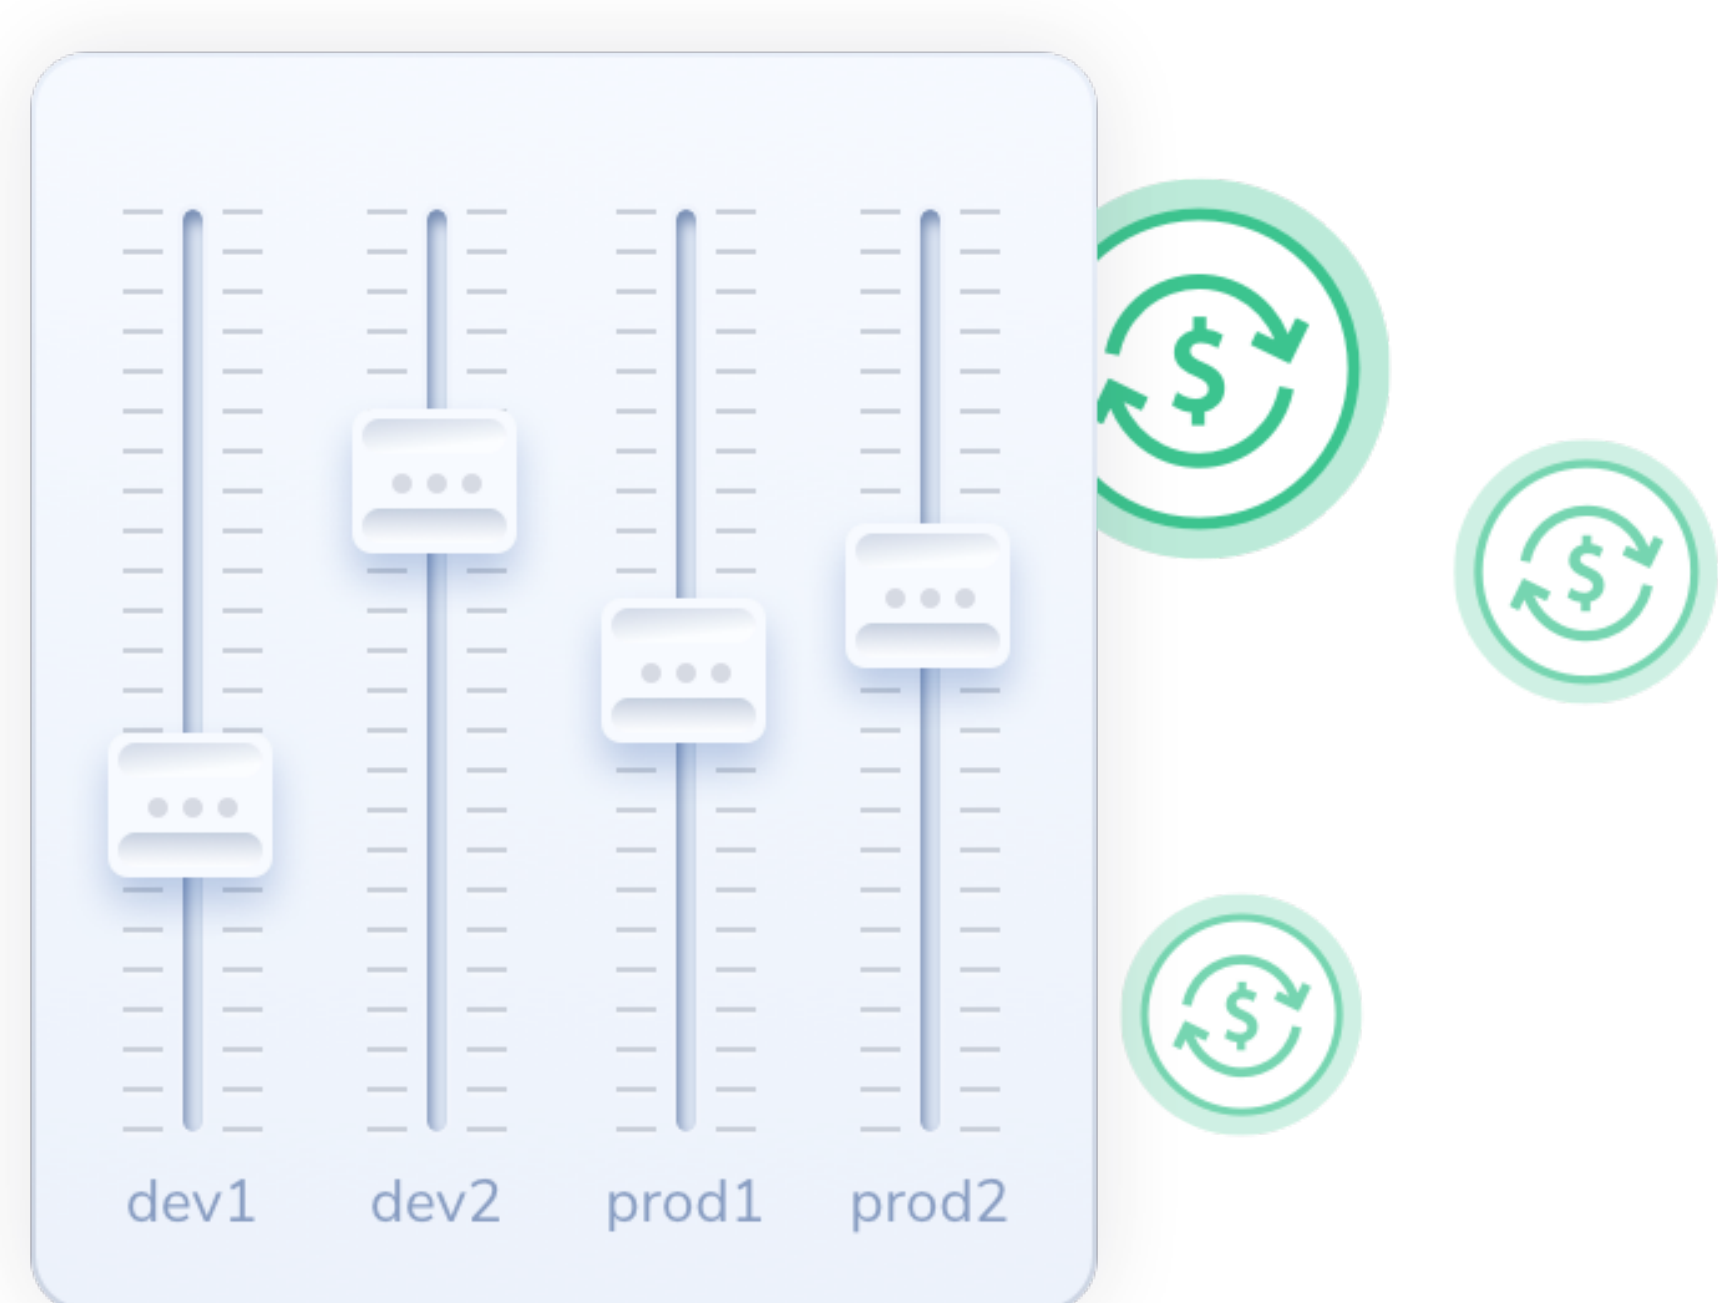

“We saved 50% on our monitoring costs with Coralogix”

Refael - SRE DevOps Team Leader

Powered by Streama Technology

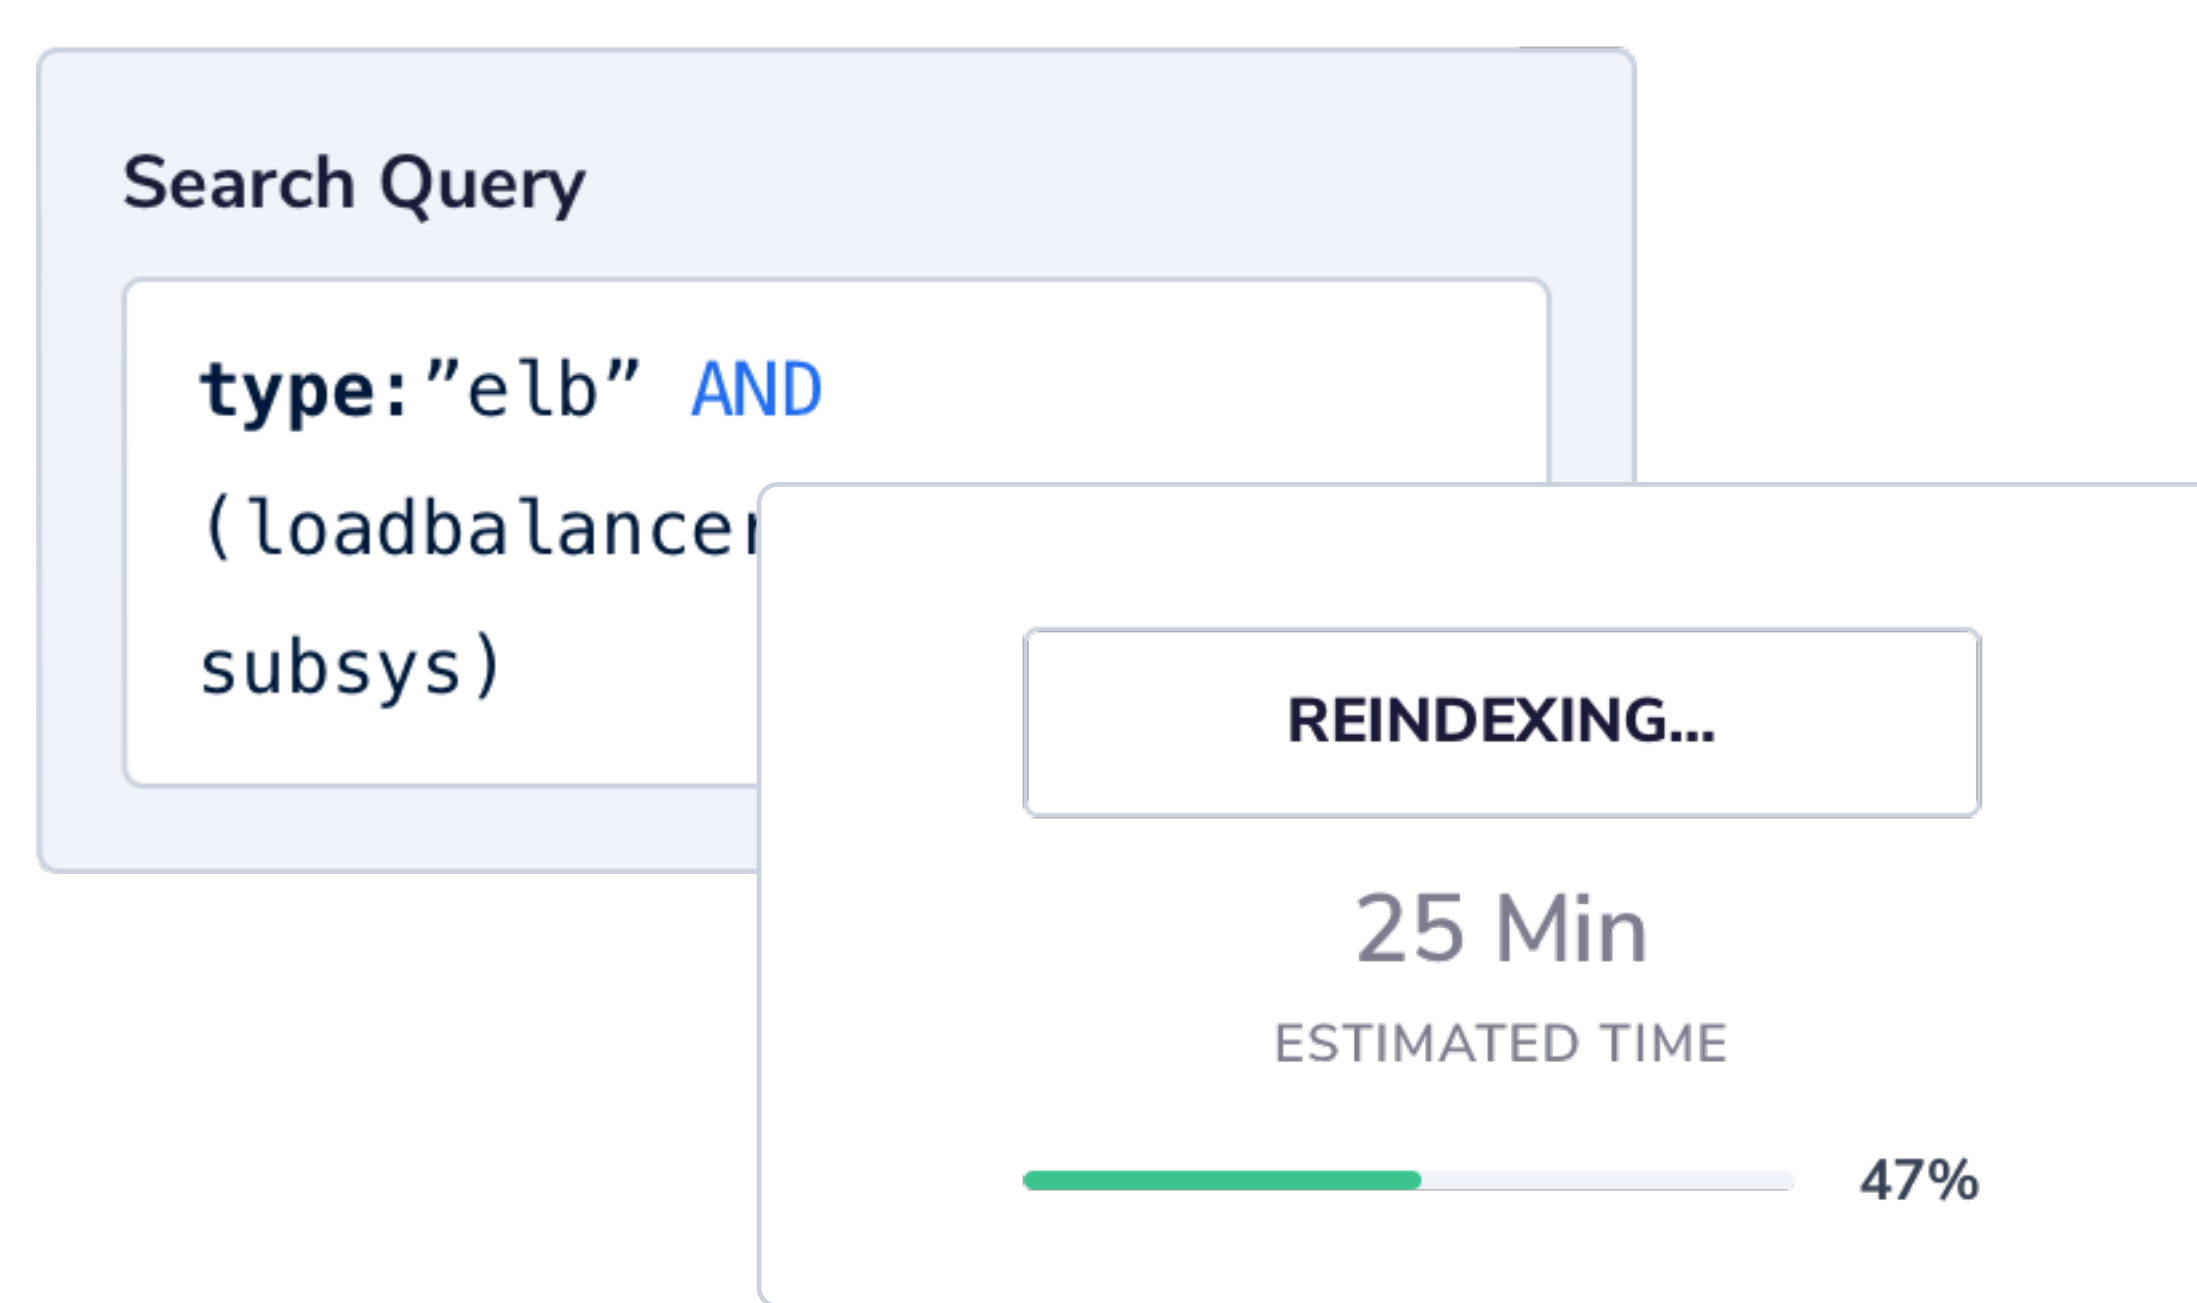

Coralogix's Streama technology is a modern approach to data that combines real-time streaming analytics with components that store snapshots of the system state for long-term trend analysis.

By analyzing in real-time and only storing what matters, Streama eliminates the need for teams to cherry-pick which data to ingest.

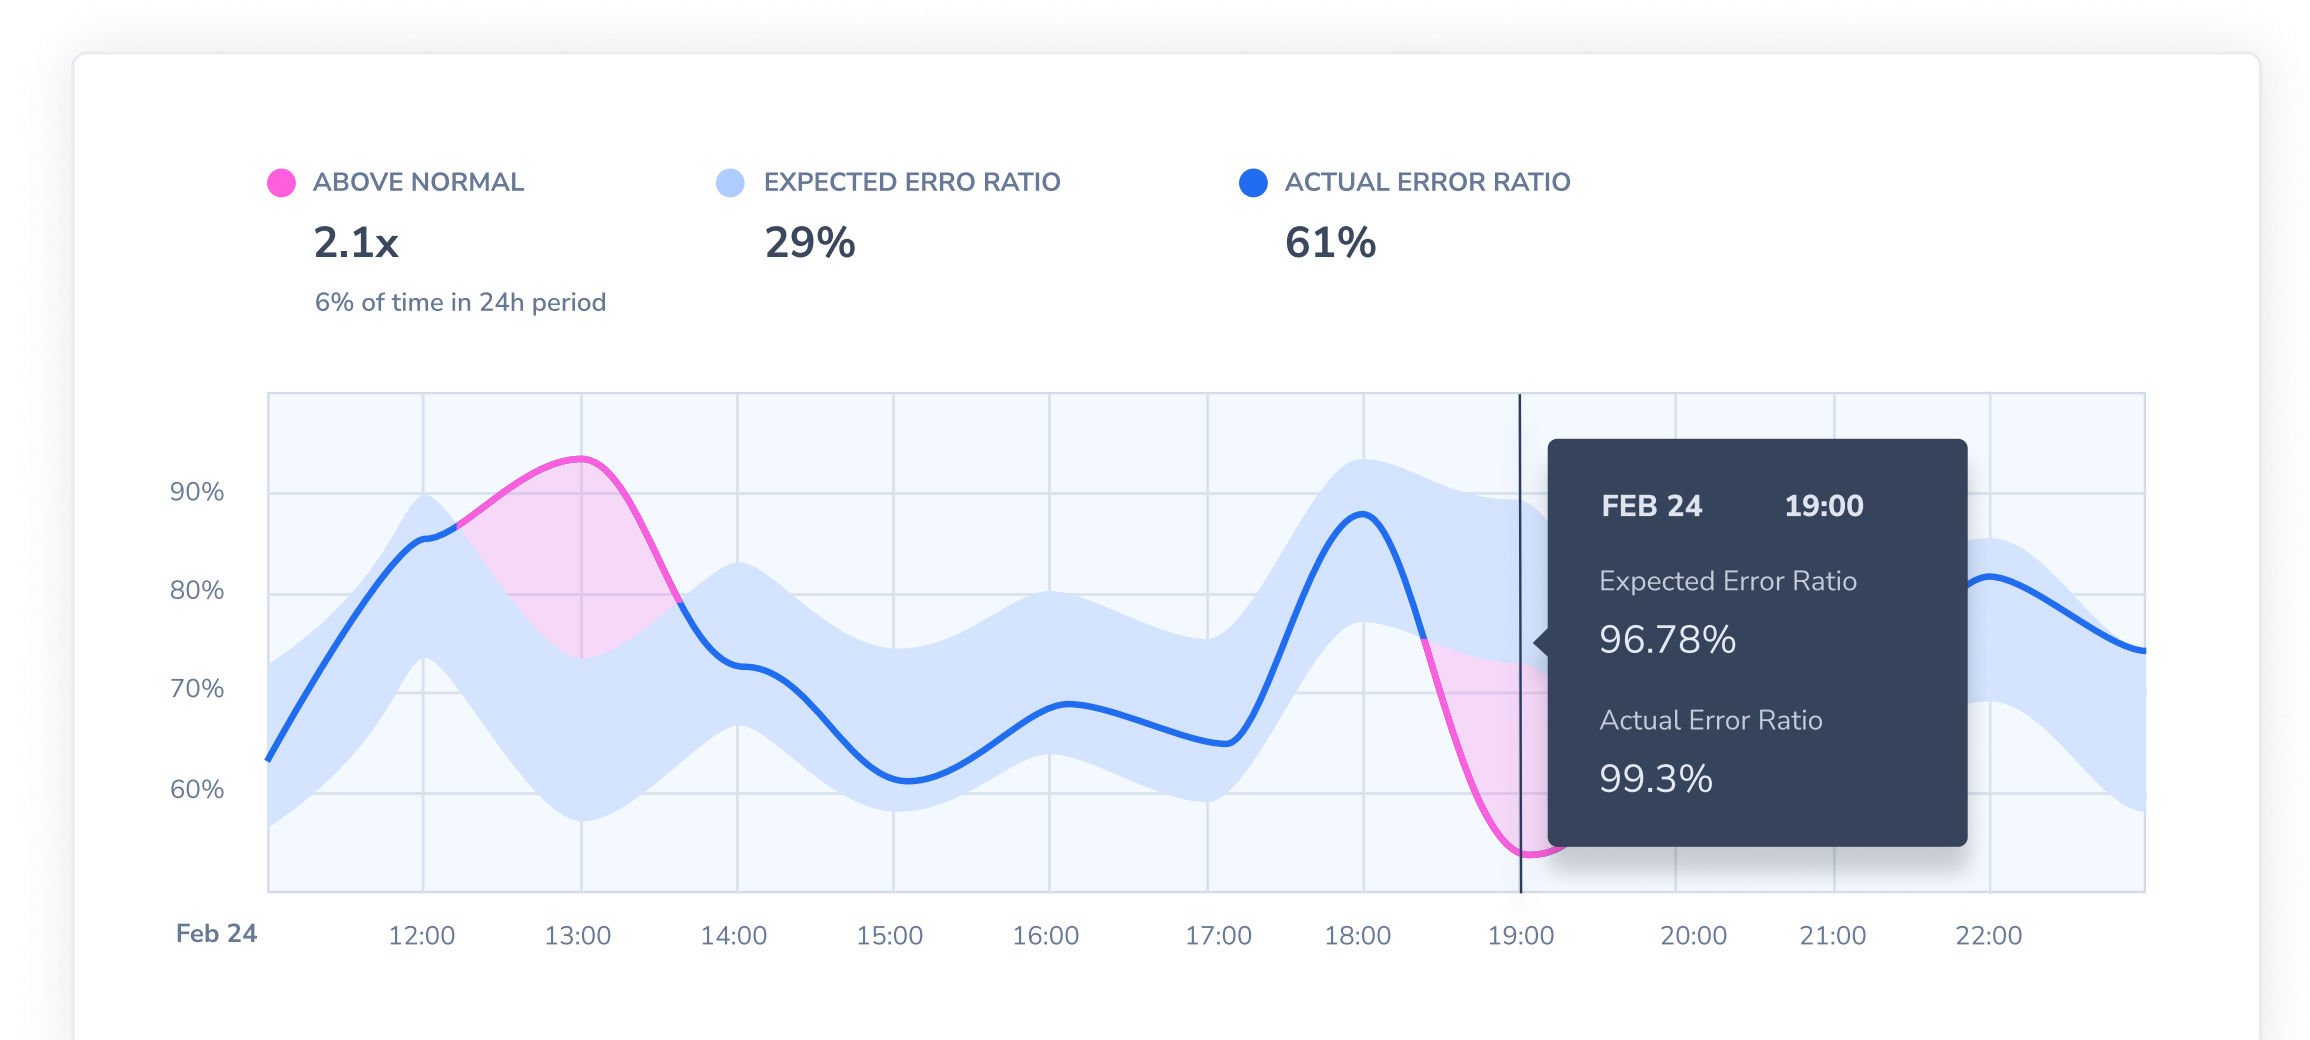

Full Feature Access, Always

Reduce your monitoring costs by up to 70% without reducing system visibility and your ability to query, monitor, and manage your data. No matter how you choose to prioritize your data, you always have full access to all Coralogix features.

Query Archive and Reindexing

Directly query your archived data using the familiar Elasticsearch syntax via UI or CLI, with no effect on your daily quota. Reindex archived data from direct query so you don't need to mount GBs of data to analyze a specific log record.

Effortless Setup & Adoption

Coralogix is easy to set up, with no complicated configurations and leverages common syntaxes known to enable widespread adoption within any organization. Plus, no vendor lock-in! The platform also auto-scales to match your system growth for long-term success.

Effortless Setup & Adoption

-  No feature restrictions EVER
-  No user limits
-  Flexible payment terms
-  Scale as you grow
-  Split data to teams
-  Quota and retention control
