

# In-Stream Data Analytics for Observability that Scales

Monitor and secure your systems with better performance and stability, lower costs, and seamless adoption across your organization.

Coralogix is a fully-managed SaaS observability platform for logs, metrics, tracing, and security data.

Using our proprietary streaming data analytics pipeline – Streama – we are able to produce real-time insights and long-term trend analysis with no reliance on storage or indexing.

## The Platform

The Coralogix platform is powered by Streama – our streaming data analytics pipeline – to provide modern engineering teams with everything they need to monitor system health and proactively resolve issues.

As data is ingested, it is parsed and stored in a client-side archive where it can be queried without counting against quota.

Data continues in the analytics pipeline for enrichment, dynamic alerting, metric generation from log data, data clustering, anomaly detection, and more. All analysis is performed on the data before indexing with only critical events being sent to hot storage to enable our lightning-fast query results.

Connect any data, in any format, and view your insights anywhere including our purpose-built UI, Kibana, Grafana, SQL clients, Tableau, or using our CLI and full API support.

## Logs

Aggregate noisy log data into templates and metrics on-the-fly for long-term monitoring

## Metrics

Centralize all infrastructure and custom metrics and effortlessly off-load homegrown Prometheus

## Tracing

Collect tracing data to track event flows and bottlenecks across distributed architectures

## Security

Fully secure your cloud-native environments to the highest standards within minutes

**“We saved 50% on our monitoring costs and gained better performance with Coralogix.”**

Refael Yehuda - SRE DevOps Team Lead

# Why Coralogix?

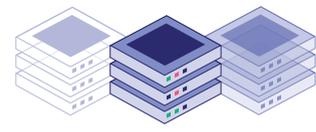

## COST OPTIMIZATION

Coralogix uses proactive insights to triage data by use case before it's indexed to enable users to optimize their monitoring costs and improve coverage with no billing overages.

## BETTER PERFORMANCE

Coralogix analyzes data in-stream without scheduled queries or reliance on external datastores to give you proactive, low latency insights for all of your system and application data.

## EFFORTLESS SCALE

Coralogix uses advanced auto-scaling bound only by CPU to meet customers' data needs and allow them to effortlessly grow their systems with full coverage and visibility.

## Powered by Streama®

Streama® is the proprietary streaming analytics pipeline that powers our observability platform. Connect any data, view in any dashboard, query using any syntax – all without relying on index and storage.
